

In the event of an exposure to infectious tuberculosis, we recommend testing for anyone at risk. Two tests are offered, the quantiferon gold (QFT) blood test and the skin test. Both tests are good indicators of tuberculosis infection.

How the testing works:

- This is an **optional** program—your child is not required to participate.
 - **If you do not wish for your child to participate, please DO NOT fill out this consent form.**
- There is **no-cost** to your family; you will **not** be billed for a copay.
- The Tuberculosis Clinic will follow up with anyone who has a positive test for next steps. Treatment and follow up is available at no cost through the Tuberculosis Clinic.

I give my permission to the Tuberculosis Clinic at Denver Health to evaluate me/my child

_____ (your child's name) for tuberculosis (also called TB). I

understand this will include asking them questions and doing a skin test or blood test. I know that if I have any questions that I may call the TB clinic at 303-602-7240.

For student:

Name of Parent/guardian _____

Signature of Parent /Guardian _____

For Staff/Adults:

Name: _____
